Term Project: Final Presentation Guidelines & Expectations

(Presentation Date: Wednesday, November 18)

Duke
PRATT SCHOOL of ENGINEERING

Overview

- **Purpose of the Final Presentation (25% of grade):**
  - Present your **complete project journey** **and** **final outcome**
  - **Clearly highlight:**
    - **The problem and why it matters**
    - **Your solution and key features**
    - **Final results, impact, and evaluation**
    - **Key learnings and insights**
    - **Future scope / next steps**
- **Total Time: 10 Minutes (HARD STOP)**

Topics to Include (topics highlighted with * need to be included, feel free to add your own topics!)

Duke
PRATT SCHOOL of ENGINEERING

- **Project Recap***
  - Briefly restate the problem, target users and 'why it matters' of your project from the introductory presentation.
  - Remind the audience of the problem you are solving and the intended impact.
- **Final Product Solution***
  - What you built and how this solution has evolved since Mid Semester Presentation
- **Data & Model***
  - Data sources and key data preparation decisions
  - Baseline creation
  - Model selection

- **Evaluation & Performance***
  - How you measured success (Evaluation metrics)
  - What improvements you achieved since Mid Semester Presentation

- **Product Experience**
  - Demo strongly encouraged but not mandatory!

- **Synthetic Data (If you used any)**
  - How did you generate this data?
  - Why did you need to generate synthetic data?

- **Deployment & Real-World Feasibility**
  - How this would work in production
  - Tech stack, integration, scalability
  - Operational challenges (cost, latency, reliability)
- **Risks & Responsible AI***
  - Bias and failure cases
  - What gaps does your project not cover?
  - How you addressed (or would address) them
- **Business Value & Impact**
  - Who benefits and how
  - Value proposition
  - Potential adoption or monetization

- **What You'd Do Next**
  - What would you improve with more time
  - Additional features or extensions
  - Scaling to new users / markets
- **Conclusion & Refection***
  - What you **achieved** (final outcome)
  - Key takeaway from the project
  - Final message: why this product matters

Tips for a Strong Presentation

Duke
PRATT SCHOOL of ENGINEERING

- Keep slides clear, concise, and visually appealing.
- Use data visuals, screenshots, or short demos instead of heavy text.
- Be transparent about challenges, focus on how you're solving them.
- Transition smoothly between speakers.
- End with a clear "what's next" slide to signal momentum.
- Rehearse to ensure you stay within the 10-minute hard stop.
